Maternal Power Production Sale

Salers, Simmental & Angus Genetics

Silent Auction Format

December 7th thru 15th At the Ranch - Drummond, Mt

Our family welcomes you to our 6th annual Maternal Power Production Sale. We will be offering 55 bulls from the top 1/3 of our male calf crop and again have 35 bred heifers from our replacement group in the sale. All of these cattle have been bred for generations with a focus on balanced, maternal, and profitable genetics for the commercial cattleman. We continue to sort our cow herd very strictly for fertility, performance, phenotype, disposition, structure, udder quality, and efficiency. We are very excited about the quality and depth of the sale offering this year and feel that there is tremendous value in the Parke Ranch genetics we have developed over the past 2 plus decades. We are very grateful for you taking time to evaluate the cattle offered in this year's sale. We welcome any questions you might have and will do our best to help you find the genetics that can help you with the specific goals and objectives of your program.

The cattle will be offered in a silent auction format running over a 9 day sale period. We are aware this is a unique sale process, but feel it is a low pressure and flexible way for you to purchase the genetics that will fit your selection and budget criteria. We have received positive feedback on the sale format from past customers. We are happy to answer any questions you might have regarding the sale procedure and how the bid off process will work. We hope the timing and length of the sale will allow you to come and view the sale offering and cow herd at your convenience. This will allow us to visit about your needs and answer any questions you might have. If you are unable to come to the ranch we will have a video of the individual bulls and the heifer groups available for viewing through a link on our website prior to Dec. 1st. We will always do our best to honestly represent the cattle.

It seems like every year we say it has been an interesting and challenging one and 2021 is certainly no different. We hope that if you were in one of the extreme drought areas that you are receiving some needed moisture this fall! We will all certainly hope for better moisture and less expensive feed in 2022! It certainly has increased the importance of fertility and efficiency in our cow herds. We are very grateful for the strength of Salers cattle in these areas and the added benefits gained from crossbreeding.

Our family has had an eventful and blessed year! Last December Melanie & Monson Wadsworth were married. They have been ranching in the Paradise Valley just north of Yellowstone Park since last April. Joseph & Aubrey continue to live next to us and work full time on the ranch. In June they had a new son, Jackson, join their family and older sister, Jaycie. Spencer continues to study Ag at BYU-Idaho. He spent the summer at home helping on the ranch and we are very excited that just after Christmas he will be marrying Alita Monsen! Deana graduated high school in May and is now in Rexburg, ID along with Spencer. She is studying business and makes it home to visit frequently. Scott is a sophomore now and is involved in enough activities to keep us busy following him from the cross country course, to the court, to the track.

The Parke Family

90 Head Sell 55 Bulls

35 Bred Heifers

2

Parke

Sale Procedure:

* Cattle will sell in a silent auction format with bidding opening at noon on Tuesday Dec. 7th, 2021.

* Bulls have a starting base price which is listed in the catalog (\$2,500, \$3,000, & \$3,500). Bred Heifers will sell in small groups with a starting base price on a per head basis.

* Bidders may place a bid at base price on any lot without a bid or raise the bid by a minimum of \$100 on any bull or \$25 on any heifer lots with a current bid. Bidding will be open until the sale closes on Wednesday Dec. 15th at 2 pm (Mountain Time).

* Bids may be placed with Eaf or Joseph via phone, text, email, or in person at any time during the sale period.

* Any lots receiving an increasing bid on Wednesday Dec. 15th may have an oral bid off at the close of the sale. This would involve the last bidder prior to the 15th and any bidders on the 15th, if they wish to continue bidding. Bid offs will be handled in order of price and as quickly as the contending bidders can be reached after 2 pm.

* Any lots without a bid during the 15th are considered sold to the high bidder when the sale closes at 2 pm on the 15th.

* Any lots without a base bid will be available for sale at the base price at the conclusion of the sale on a first come basis.

* We would encourage bidding early in the sale period to reduce the number of bid offs and to allow you to move to other lots.

* A spreadsheet will be updated frequently with current bids on our website at www.parkeranch.com or you may request update notifications if your bidding status changes.

Sale Terms and Details:

* Females need to be picked up by the buyers by Dec. 31st.

* 1/2 of purchase price is due at sales conclusion with the balance due at delivery.

* Bulls will be fed free of charge and at our risk until delivery, beginning around March 20th.

* Bulls will be delivered free of charge up to 500 miles with any additional mileage at cost.

* All bulls are guaranteed for disposition, structural soundness, and fertility for the first breeding season.

* We will notify you as soon as possible if any bulls are injured in our care or do not pass the semen test. You may select a replacement bull if one is available, future credit, or receive a refund of your initial payment.

* Parke Ranch is retaining 1/3 semen interest on all sale bulls and will collect semen before delivery, at our cost, on any we desire to use in our AI program. You have full salvage value.

* A volume discount of 5% will be given on any purchase of 5 or more bulls.

kanc **Bull History & Development:**

- * Bulls had actual birthweights taken with a scale at birth.
- * They have been raised without creep. Just milk and grass.
- * Sale bulls are from the top 32% of our male calves. They were sorted many times based on dam quality, birthweight, disposition, confirmation, performance, and soundness.
- * Bulls were weaned on October 5th and are being fed free choice long stem mixed hay and 6 lbs of bull challenger pellets.
- * They will be fed for a 2.8 lbs/day gain to grow them out sufficiently while ensuring their soundness and longevity.

* Bulls will be semen tested and vaccinated in March and be ready for turn out when delivered.

* Fall vaccinations included: Vision 8, Pyramid 5, Autogenous Type A, Autogenous Respiratory, Multi-Min, and Footrot. Spring vaccinations: Vision 8, Pyramid 5, Reprostar VL5 HB, & Footrot.

Catalog Details:

* All double black bulls were DNA tested for coat color and those found to be homozygous black are designated in catalog.

* Lot base prices are found in the upper right hand corner.

* Dams average on calves birthweights and weaning indexes are listed along with her udder score (the first digit represents her udder suspension and the second digit is teat size, with 9 being the best and 1 the worst).

* The listed EPD's are from the American Salers Association.

* Potential Heifer bulls are ranked.(4* being the most reliable)

Cattle Inspection:

* Cattle are available for inspection at any time now or during the sale period. If you desire to call ahead we can make accommodations to improve your viewing experience.

* Have lunch on us. Plan a little extra time when you come to look at cattle and have a famous Parkers Hamburger on us at the restaurant in Drummond (they are closed Sun. & Mon.).

* Exit interstate 90 at Drummond and head south on Hwy #1. After 2.6 miles turn east on Mullan Road and then travel 1.5 miles and our ranch is on the left.

Additional Information:

* A link to a video of the individual bulls and heifer groups will be up on our website before Dec. 1st.

* We will have updated weights and scrotal measurements on all sale bulls at the start of the sale. These will be available on our website or when you come to view the cattle.

New at Parke Ranch:

* We have expanded our offering this year of our Enhancer bulls. These are a 3 way cross of Salers X Angus X Simmental. Please see page 21 for more details and a further explanation.

* Jabari is a big, powerful, well made bull that will add a lot of performance to his black calves.

* He is a great option for use on cows in either a terminal cross situation or for producing great females.

* His dam is a proven female with no holes who raises a top calf every year. Very long bodied and good uddered cow.

* Quad Polled

* Journey is another long bodied General son who demonstrates some of his sires massive volume and rib shape. * His mother has earned Gold Dam recognition and is a good milking and thick made female. All of her calves have been kept as replacements or made the bull sale.

Value to be Found

We would encourage you to look through all of the bulls in the sale as often there is great quality to be found in the lower price groups. This year we feel that the bulls are even more closely grouped in quality from the top to bottom. We had to make these price group decisions more than a month before the sale begins and some of these bulls change pretty rapidly after starting on feed. Your priorities and preferences may also differ from our opinion and judgement.

* Justice is a very balanced and attractively made Velocity son. He offers an outcross pedigree to our long time customers.

* His 2 year old dam is a feminine female with great length who did a super job with her first calf.

Apples & Oranges – Food for Thought

Here at Parke Ranch we believe in honest, accurate, objective, and complete data collection and reporting. This is the beginning point of any valuable analysis or decision making which uses weights, indexes, or EPD. One of these times of data collection is at an animal's birth. We weigh each calf with a digital scale within 24 hours of their birth. Several years back I conducted my own experiment by both weighing and using a tape to measure and estimate birth weight for every calf born that year. I found the tape measuring method to be very subjective depending on who was measuring, where the tape was placed, how tight it was pulled, or the composition of the calf. We found a correlation between the two methods of measuring birth weight, but definitely found that the heavier calves were several pounds lighter using the taping method when compared to the actual scale weight. Because of this experience we have decided to weigh each calf with a scale. We recognize that many producers for various reasons use other methods. If comparing birth weights between animals from different producers, it might be of value to make sure you are comparing apples to apples.

Birth weights are also significantly impacted by several factors other than just genetics. Environment and producer practices also have a

large effect on a calf's actual birth weight. The weather conditions (temperature) play a role in the size of the developing fetus. Calves with the same genetic make-up will weigh more at birth in the colder climates of the North when compared to those born in the Mid-West or the South. Birth w eights are also lower in those calves born in the Fall compared to late Winter or Spring. The body condition, size and age of the dam during fetal growth will impact the birth weight as well. The length of gestation can be impacted by several variables and play's a role in a calf's weight at birth. These factors and others are important to consider if we are comparing weights between different herds and environments. Make sure you aren't comparing apples to oranges!

It is true that for many years birth weight was maybe the only performance indicator we had to use in predicting calving difficulty of offspring. Over the last couple of decades however we have developed other indicators that are more reliable when attempting to predict calving ease. The EPD for birth weight uses calculations that remove the variables caused by environment, producer differences, or even methods of weighing. (This is also true of the other EPD figures) Because of these reasons we would encourage you, if birth weight is an area of concern in your selection process, to utilize the BW EPD rather than the actual birth weight when making comparisons between animals

(especially if they are from different herds).

If you are concerned about the calving ease of an animal's offspring, we would encourage you to focus less on the BW EPD and look more to the Calving Ease Direct EPD. Calving Ease Direct takes into account additional factors other than just birth weight which impact dystocia and calving difficulty. This EPD is expressed as a percentage of unassisted births from an animal's offspring. For example: if the CED EPD for bull A is +16.3 and bull B is +11.3 you could expect heifers bred to Bull A to have 5% more unassisted births than if the same heifers were bred to Bull B.

We recognize that the actual birth weights of the cattle at Parke Ranch are quite possibly higher than are listed in other operations. We believe that this is because of some of the reasons we have discussed above. We have used enough proven herd sires in our program that we have confidence in the accuracy and predictability of our Birth Weight EPD numbers. The reports we have received from past customers continue to validate this

belief. Each year we analyze our actual birth weights and castrate any bulls who we have concern might not be safe for use on any mature cows. We also sell as feeders any heifer calves who have excessive birth weights. In an effort to share all of the information we have in helping you with your selection, we have listed the average actual birth weights of a dam's offspring. We have also designated in the cata-

log the bulls we feel confident may be suitable for use in breeding heifers. This year we scored these potential heifer bulls with a star system. The 4 star bulls are those that we are the most confident in for use on heifers and the 1 star bulls are those we feel would work on some larger heifers. We are always willing to answer any questions you may have regarding our program or any specific sale animal.

* * * Potential Heifer Bull - Quad Polled

* Jeopardy shouldn't have any risks as a heifer bull. A bull with a nice design and profile and good length.

* His young dam comes from a very good length. gold dams and a big presence in our herd.

* Guideline was our pick for a heifer bull in Skinner's 2020 production sale. His first 42 calves averaged 81 lbs at birth and are demonstrating good thickness and growth.

* * * * Potential Heifer Bull - Quad Polled

* Junior should make a consistent heifer bull, yet he still has some muscle and shape to his phenotype.

* His dam is a well made and attractive female who is part of Deana's 4-H cow family. Last year's bull sold in our sale as a heifer bull. Pedigree goes back to Lot #7's dam.

EPD and Catalog Explanations

Below is a chart showing the Salers Breed EPD Averages for all 2019 born cattle.

| EPD's | CED | BW | ww | YW | MWW | Milk | Marb | REA | Doc | Stay |
|----------|-------|------|-----|-----|-----|------|------|-------|-----|------|
| Breed Av | +12.2 | +0.1 | +57 | +80 | +45 | +16 | +0.4 | +0.69 | +10 | +14 |

The Salers and Simmental breed associations are both part of the new IGS multi-breed genetic evaluation. This means you can directly compare the Salers, Optimizer, and Enhancer EPD's.

All EPD's in the catalog were current as of Nov. 1st. These are now updated weekly so you may find the most current EPD for any animal by using the American Salers Association website and search with the animals registration number.

CED (calving ease direct) - Expressed as a % of unassisted births. A bull with a +17.2 would be expected to produce 5% more unassisted births than the average Salers bull when bred to the same cows.

Doc (Docility) - Expressed as a percentage of an animals offspring that would be expected to have mild or restless disposition scores (1 or 2) rather than nervous, flighty, or aggressive scores(3, 4, or 5). A +20 means an animals offspring would be 10% more likely to have mild disposition scores than the breed average.

Stay (Stayability) - Expressed as a percentage of daughters who will remain in the herd until age 6. Cattle with a stayability of +20 would have 6% more daughters remain in the herd until at least age 6 than the average Salers.

Color - Hom. Black (Homozygous Black) bulls were DNA tested and will produce all black offspring when bred to red or black cows. **Black** - Black hided animal possessing one black and one red gene. When they are bred to black females also with a red gene they will produce 75% black offspring. When bred to red cows they will produce 50% black calves.

Dam's Production - BW Number of calves born and their average actual birth weight in pounds. WW is the number of offspring weaned and their average weaning index. Udder is a two digit score representing teat size and suspension with 9 being ideal.

* A bull with good depth of body and thickness who will sire all black calves that will make a good set of feeding cattle. * His moderate framed mother is another SRS Bullseye

daughter with a very good udder.

* His sire, MAC Enduro, has been doing a solid job in our program and for MJB Salers.

* Quad Polled

* Java is a bigger, long bodied bull with eye appeal. His full brother last year was a top seller going to Roger Derks. * Java's dam is a moderate, very attractively made female who is easy fleshing. She is deep and very thick made with a great udder for an older cow. Ideal in her type and kind.

* * * * Potential Heifer Bull - Quad Polled

* A balanced well made bull who will work great on heifers with several calving ease sires in his pedigree.

* His 2 year old dam has the look of a great female with good thickness and an easy fleshing body type. Like all SRS Spartacus daughters, she has an exceptional udder design.

* Twin - Quad Polled

* He is a twin to Lot #36 and if you are looking for consistency these two bulls are identical. His calves will be moderate, thick, and early maturing.

* Attractive female with great balance and a super personality.

Breed Explanations

<u>**Optimizer**</u> - Term used by the Salers Association to refer to cattle that are crossbred between registered Salers and Angus or Red Angus cattle.

Enhancer - Name we have given to our 3 way cross cattle which are made up of Salers, Simmental, and Angus or Red Angus. We have been using 1/2 to 3/4 Salers X Angus or Red Angus and breeding them to 1/2 to 3/4 Simmental X Angus or Red Angus. We are more concerned with the type of cattle and their contributions to our program than specific percentages.

We have been breeding Salers cattle for 25 years and prior to that were using Simmental in our commercial herd. We have decided to again incorporate some Simmental genetics into part of our cattle. We feel this can increase the level of hybrid vigor and genetic diversity available to our customers. Simmental can contribute performance, depth, thickness, and rib eye area to their offspring. Salers cattle add calving ease, calf vigor, dressing percentage, fertility, hardiness and a cleaner more eye appealing phenotype. All three of the breeds are very strong in maternal traits and that continues to be a big focus of our breeding program! We plan to continue to breed Salers cattle as well as Optimizers as we increase and develop our Enhancers.

* Ouad Polled

* Jumbo is truly a fitting name for this massive bull. He has been leading the pack all summer for performance and is the heaviest bull in the sale. For all his power he still maintains good balance.

* His young dam has great length and thickness along with a very good disposition. She is doing a great job as her first calf was a top seller in last years sale to Roger Derks.

* * * Potential Heifer Bull - Quad Polled

* Journalist has a lot of potential as a Purebred heifer bull herd sire. He is a very attractively profiling bull with good thickness and a balanced phenotype.

Bred Heifers

Parke Ranch Bred Sale Heifers

Most of these heifers were bred, born, and raised here on our ranch. Last fall we did pick a few heifers from a long time commercial customer, Dustin & Shannon McCollum. The 10 heifers with a commercial sire came from their program. They were all developed together through the winter on long stem grass hay. They have not been fed any concentrates or supplements other than mineral. These heifers sell as commercial heifers even though several of them are registered females and siblings to the bulls selling in this and past sales. They are bred to calving ease sires for both AI and clean-up bulls. You can find most of their service sires listed following the heifer lots or in the Reference Sire section before the bull lots. They were ultra sounded for calving dates on Aug. 10th after a 60 day breeding season. We have sorted the heifers into smaller groups by calving dates. They will sell in the silent auction along with the bulls. The heifers have base prices listed with each group on a per head basis. The bidding will proceed with \$25 per head bid increases until the close of the sale at 2 pm on Dec. 15th, in the same format as the bulls. We would ask that you make arrangements to pick up your heifers by the end of the year. A video of the heifer lots will be available on our web site or you may come at any time to view the heifers.
