2025 Maternal Power Production Sale

10TH ANNUAL PRODUCTION SALE

Thursday, December 11th, 2025

At the Ranch – Drummond, Montana

Salers, Simmental, and Angus Genetics

175 Head Sell! - 85 Bulls - 55 Bred Heifers - 35 Bred Cows
- Pick of 2025 Heifers Calves -

ParkeRanch.com

We are very excited to welcome you to our family's 10th annual Maternal Power Production Sale. We are so grateful for your past support of our program! We appreciate you taking time to look at this year's sale offering and would welcome any questions or input you might have regarding the cattle or our program. We are grateful for any feedback you might have regarding past purchases. WOW, what an exciting time to be involved in livestock production! It is great to see where these markets have been this year and the demand for our high-quality beef! It is definitely well deserved and looks encouraging to continue for several years!

This sale offering is our deepest in quality from top to bottom we have ever put together. We are confident they have a lot to offer the cattle industry as well as your individual operations. One big change we have made this year is to move to a live auction. As we increased our numbers it was becoming increasingly difficult to manage the sale in our old format. We will be holding the sale at our ranch, where the cattle will be penned for viewing and then we will utilize the videos on tv screens for the auction sale. The sale will also be broadcast on DVAuction for those unable to attend on sale day.

This year's sale will again feature Salers genetics as well as a large offering of crossbred Optimizer cattle and a big group of our Enhancers (SA x AN x SIMM). We will be selling 85 bulls, 55 bred heifers, 35 bred cows, and a highlight feature of the pick of our 2025 heifer calves! These cattle are developed with a balanced approach and from a foundation of cows with a maternal base. They are bred to work in the real world and possess genetics to bring profitability through fertility, efficiency, and longevity.

This year has brought more changes to our family. Scott continues to serve as a missionary in Missouri and enjoys the opportunities and experiences that come with that service. He will be returning home next July (hopefully in time to help hay). Deana has had an eventful year as she graduated from BYU-Idaho in July as a business marketing major. Then in August she married Hesston Thomas! Hesston is from a small agricultural community in northeastern Utah called Tabiona. We are thrilled to have Hesston as part of our family! They live in Rexburg, ID as he continues to study construction management. Both Spencer & Alita and Joseph & Aubrey continue to live on the ranch and keep things running smoothly each day. Their kids continue to grow quickly and are very active and involved. Melanie and Monson are still living and building fence in Moore, Idaho. They just welcomed their first child, a boy, on November 12th and that makes 4 grandsons and 1 granddaughter for us! Unfortunately, we lost Grammy (Eaf's Mom) in June of this year after many years of poor health and a quick fight with cancer. She is greatly missed by all!

Once again, we thank you for taking time to consider our program as a source for your seed stock needs! Watch for videos of the sale cattle by late November. Feel free to stop by or contact us at any time to discuss the sale offering and hopefully we can see you on December 11th!

Thank you,
The Parke Family

Parke Ranch

10th Maternal Power Production Sale

December 11, 2025 Lunch 11:30 am – Sale 1:00 pm At the Ranch - Drummond, Montana

Eaf Parke - 406-240-4167 | Joseph Parke - 406-396-0369 | Spencer Parke - 406-498-6131

Home - 406-288-3573 | parkeranch@gmail.com

AUCTIONEER

Kyle Shobe 406-366-0472

SALE REPRESENTATIVES

Jeff Thomas, Prairie Star, Ag Weekly 406-581-8859

Matt Wznick, Western Ag Reporter 406-489-2414

Dean Pike, American Salers Association 303-810-7605

SALE TERMS AND DETAILS

- 1/2 of bull purchase price is due at sale time with the balance due at delivery unless other arrangements are made prior. If you desire you may pay full purchase price at sale time.
- Bred Females need to be picked up by December 31st.
- Bulls will be fed free of charge and at our risk until delivery, beginning around March 20th.
- We will notify you as soon as possible if any bulls are injured in our care or do not pass the semen test. You may select a replacement if one is available, credit, or receive a refund of your initial payment.
- Bulls will be delivered free of charge up to 500 miles with any additional mileage at cost.
- Parke Ranch is retaining 1/3 semen interest on all bulls and will collect semen before delivery, at our cost. You have full salvage value.
- A volume discount of 5% will be given on any purchase of 5 or more bulls.

CATTLE INSPECTION

- Cattle are available for inspection at the ranch at any time from now until sale day. Cattle will be penned at the ranch for viewing sale morning by 9:30 am.
- Lunch will be served sale day beginning at 11:30 am and there will be doughnuts, hot chocolate and juice available that morning.
- Exit interstate 90 at Drummond and head south on Hwy #1 towards Philipsburg. After 2.6 miles turn east on Mullan Road and then travel 1.5 miles and our ranch is on the left.

FIRST SEASON BREEDING GUARANTEE

- All bulls are fully guaranteed for disposition, structural soundness, and fertility (semen quality & breeding ability)
- If a bull is deemed unusable due to any of the above reasons, please notify us before October 1, 2026 and prior to the bull being sold. You will be given an opportunity to pick a suitable replacement, if one is available, or given credit for a future purchase (purchase price less salvage value).
- We are not responsible for injury, neglect, sickness or death that is outside of our control.

BULL HISTORY & DEVELOPMENT

- Bulls had actual birthweights taken with a scale at birth.
- They have been raised without creep. Just milk and grass.
- Sale bulls are from the top 35% of our male calves. They were sorted many times based on dam quality, birthweight, disposition, confirmation, performance, and soundness.
- Bulls were weaned on October 6th and are being fed a mixed ration of alfalfa/grass hay, hay barley silage, and whole corn.
- They will be fed for a 2.8 lbs/day gain to grow them out sufficiently while ensuring their soundness and longevity. Customer reports have been very positive about the bulls condition and longevity.
- Bulls will be semen tested and vaccinated in March and be ready for turn out when delivered.
- Fall vaccinations included: Vision 8, Pyramid 5, Autogenous Type A, Autogenous Respiratory, Multi-Min, and Footrot. Spring vaccinations: Vision 8, Pyramid 5, Reprostar VL5 HB, & Footrot.

CATALOG DETAILS

- All double black bulls were DNA tested for coat color and those found to be homozygous black are designated as such in the catalog.
- Dams average on calves birthweights and weaning indexes are listed along with her udder score (the first digit represents her udder suspension, and the second digit is teat size, with 9 being the best and 1 the worst).
- The listed EPD's are from the American Salers Association.
- Potential Heifer bulls are ranked.(4* being the most reliable)

SALE ORDER

- Cattle will sell in catalog order with bulls first, followed by Pick of the 2025 heifer calves, then bred cows, and lastly bred heifers.
- We may pull a few bulls forward to lead off the sale with and then resume catalog order following them.
- Our website the night before will have any order changes or outs.

ADDITIONAL INFORMATION

- A link to a video of the individual bulls and heifer groups will be on our website late Nov. Sale videos will also be posted on DVAuction.
- We will have updated current weights and scrotal measurements as well as disposition scores on all sale bulls prior to the sale. These will be available on our website or at the sale.

JANET SAVAGE PARKE

We wanted to dedicate this years Maternal Power Production sale to our wife, mother, grandmother, and great grandmother "Grammy" who we lost this past June. She will be greatly missed as the matriarch of our family. Her continual encouragement, interest and support have helped us develop our program over the decades and made possible our dreams! She and Charlie have made it a possibility for our family to live and work together in doing what we love in the beautiful Flint Creek valley.

Janet grew up in a family who raised cattle and registered Quarter horses in various areas of the Western United States. She married Charles Parke in 1971 and made Drummond her home from then on. They raised their 4 children on the families ranch where she was very involved in the operation in the early years, until her health challenges made it impossible. She was the motivating support in our years of 4-H, school, and various sporting activities.

In recent years most of our family gatherings have taken place in the living room at Grammy's, as we gathered to visit and share our weekly activities. Everyone enjoyed and loved being around Janet because of her genuine interest and unwavering support for whatever was important to those around her! Her support and encouragement will continue to give us strength and motivation to pursue our goals and dreams until we are able to be together again!

HONORED GUEST

RON & BEV SKINNER FAMILY

None of us have success or get to where we are without the help of others! We wanted to recognize and pay tribute to a family who has had a huge impact on our program and have been invaluable in their help over decades! This family is the Ron and Bev Skinner family of Hall, MT. Their influence and mentoring began in the 1980's when I was a young 4-H member and has continued through the years until today.

When I returned to the ranch after college we purchased a couple of Red Angus bulls from Skinners for our commercial herd. I soon recognized the quality and benefits of their Salers cattle, and they allowed us to purchase our first registered Salers females in 1996. They permitted us to consign a few of the bull calves to their production sale starting in 1997 and thus started our adventure into the seed stock business. We continued to add a few more females from their genetics as well as purchase herd bulls from them almost every year since then. The foundation of our cow herd is almost entirely from Skinner genetics. For over 20 years they allowed us to consign bulls or females in their Production Sales. I don't claim to know a lot, but almost everything I know about the seed stock business I learned from my involvement and association with the Skinner family!

In addition to the genetics and seedstock industry knowledge gained over the years there has been a lot of general livestock information shared by Ron. We spent many miles traveling to feedlots, cattle tours, and bull delivery trips discussing the livestock industry. I think it would be hard to find anyone more knowledgeable than Ron regarding nutrition, health, vet issues, vaccines, and cattle evaluation. I am grateful for the little bit that I may have picked up from these many discussions and his willingness to come and help with vet challenges over the years. Bev is a great resource when it comes to record keeping and always available to get needed vaccines. She is also a great help in handling permits and any lab work needed for transporting cattle out of state. In addition, Bev has fed me lots of lunches over the years.

In addition to the help of Ron & Bev we have also benefited from their sons, Tim & Kim, being willing to share their knowledge and expertise. They have been a tremendous help over the years from tips on clipping, choosing 4-H calves, Angus genetic research, and embryo transplant protocols. Most recently we have relied on their experience and advice as we are moving to a live auction and feeding the bulls on a mixed ration.

We are extremely grateful for good friends and neighbors like the Skinner family! Our family and program have benefited and been impacted for good because of their willingness to take time to share their knowledge and mentor someone in pursuing their dreams! We would not be here today without the influence and help of the Ron & Bev Skinner Family! You have our most sincere Appreciation!

- Our pick and high seller from the 2024 Midland Bull Test Sale.
- Highest WDA bull on test and second highest Midland Indexing bull.
- Liberty is an extremely long bodied and thick topped bull with lots of quarter shape & thickness.
- Dam is a proven high performance female with lots of thickness & volume.
- Liberty's first set of calves weaned off very heavy with a great deal of length and thickness throughout.

- Patriot is a Freedom son that Deichman Cattle Co. purchased from Doubet Ranch.
- We used Patriot AI for a couple of years and then added him to our herd bull battery 2 year's ago.
- We really like the balance, eye appeal and composition of the Patriot calves and they are moderate birth weight with above average performance.

- Monument is a Patriot son who sold in our 2023 sale to Deichmann Cattle Co. and Jensen Brothers.
- We used him in our AI program with good results on both heifers and cows. *He was a standout in our 2023 calf crop with super balance in an attractive and thick made moderate frame.
- His calves look to be following his pattern for style and thickness.

- Flint is an elite calving ease sire that we retained for our herd sire from our 2018 calf crop.
- We now have 178 calves sired by Flint and he is as proven a calving ease bull as we have ever used along with being a disposition improver.
- His biggest contribution is probably his females as they are moderate, easy fleshing, terrific uddered, and great footed and we expect them to be around a long time!

- We retained Laser from our 2023 calf crop as a calving ease bull.
- We are using him as a replacement for his sire Flint as a bull we are using heavily on our heifers.
- Laser is a long spined bull that is very clean and nicely designed in his front 1/3 while still carrying good thickness.
- His young dam has averaged 80 lbs at birth on her calves with a 109 weaning index and will have gained gold dam status after this year.

- Lookout was a heifer bull we sold in our 2023 Production sale to Intermountain Bison.
- He is a moderate framed, thick bull with tremendous eye appeal and lots of calving ease.
- Lookout's dam weaned him at 76% of her body weight as a 2 year old and has continued that great efficiency with her next two impressive calves.
- We didn't have a large number of Lookout calves but they averaged 79 lbs at birth with over a 100 weaning index.
- His calves are moderate in size but possess lots of thickness and style.

- This Enhancer bull was a top seller in our 2023 sale to Tracy Lake Land & Livestock and we used him pretty heavily in our AI program because of his phenotype and EPD combination.
- Lineup had as much width of top and thickness of quarter as a calf as anything we sold that year.
- His dam has as much volume, capacity, and thickness as any young female in our herd.
- The Lineup sired calves are likely the top sire group this year with moderate birthweights, top weaning performance, and very gentle dispositions.

- Jailbreak was used in our AI program to bring in some new genetics for our Enhancer program.
- He was selected for his balanced EPD profile, super phenotype, and knowledge that his dam had consistently raised top end bulls in the Gateway Program.
- His calves have very good length of body, tremendous rib and volume, along with wonderful dispositions.
- His first sons at our place performed very well on feed and were some of the top yearling indexing bulls on test.

- Knight is a bull that didn't sell in our 2022 sale because of a heavier birthweight and we kept him to use as a clean up sire.
- He is a very thick and deep bodied bull that is balanced and attractive in his make-up.
- Knight calves have an eye catching look with moderate birthweights and good performance and the more we see of them the better we like Knight.
- His dam is a feminine, cleanly designed female who continues to do a very good job in our herd and we are excited to see Knight daughters in production.

Quad Polled

- A bull who combines a balanced set of numbers to back up a very balanced and attractive phenotype.
- He is very long bodied and possesses a powerful hip and a very easy going demeanor, all typical of the Lineup offspring.
- Dam is a moderate, deep bodied proven female who milks heavily and descends from a lineage of gold dams.
- PRK Lineup was a top seller in our 2023 Sale to Tracy Lake Land & Livestock and his first calves are among our top sire groups.

- Noble is an extremely long spined bull with lots of power and an expressive muscle pattern while being very gentle.
- His gold dam is a balanced, good milking female who has consistently raised high performance offspring.
- She is the grand dam to lot #64 and great grand dam to lot #22.
- ECR Liberty was our pick and high seller in the 2024 Midland Bull Test Sale from Elm Creek Ranch.

EPD and Catalog Explanations

Below is a chart showing the Salers Breed EPD Averages for all 2023 born cattle.

EPDs	CED	BW	WW	YW	MWW	Milk	Marb	REA	Doc	Stay
Breed Av	+12.7	-0.4	+60	+88	+48	+18	+0.1	+0.60	+11	+15

The Salers and Simmental breed associations are both part of the new IGS multi-breed genetic evaluation. This means you can directly compare the Salers, Optimizer, and Enhancer EPDs.

All EPDs in the catalog were current as of Nov. 1st. These are now updated weekly so you may find the most current EPD for any animal by using the American Salers Association website and search with the animal's registration number.

CED (calving ease direct) - Expressed as a % of unassisted births. A bull with a +17.6 would be expected to produce 5% more unassisted births than the average Salers bull when bred to the same cows.

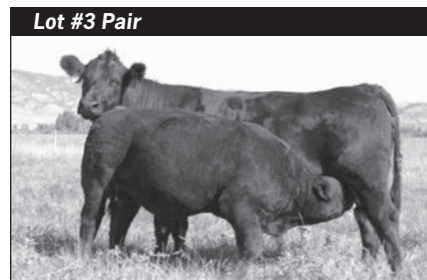

Doc (Docility) - Expressed as a percentage of an animals offspring that would be expected to have mild or restless disposition scores (1 or 2) rather than nervous, flighty, or aggressive scores (3, 4, or 5). A +21 means an animals offspring would be 10% more likely to have mild disposition scores than the breed average.

Stay (Stayability) - Expressed as a percentage of daughters who will remain in the herd until age 6. Cattle with a stayability of +20 would have 5% more daughters remain in the herd until at least age 6 than the average Salers.

Color - Hom. Black (Homozygous Black) bulls were DNA tested and will produce all black offspring when bred to red or black cows. Black - Black hided animal possessing one black and one red gene. When they are bred to black females also with a red gene they will produce 75% black offspring. When bred to red cows they will produce 50% black calves.

Dam's Production - BW Number of calves born and their average actual birth weight in pounds. WW is the number of offspring weaned and their average weaning index. Udder is a two-digit score representing udder suspension and teat size with 9 being ideal. The first digit corresponds to udder suspension tightness and how level the udder floor and quarters are and the second digit represents the teat length, diameter, and shape.

Gold Dam - Used in the footnote comments. A designation from the Salers Association for those females who meet or exceed the following requirements: Calve by the age of 2.3 years, wean a minimum of 3 natural calves each born within a 395 day interval, and their calves must average at least a 105 weaning index. This designation represents the top 2% of registered females. Gold dams and sires are designated in pedigrees by an *.

Quad Polled

- This Lineup son is an easy find in the pen for his clean, smooth, and attractive design.
- He possesses a great deal of length and is a bull who we considered keeping for a herd sire, but will likely just use him in our AI program.
- Novel's dam weaned him at 55% of her body weight.

Cole and Brooklyn Tuckett of Stevensville, Montana purchased a couple of steers from us last fall as their first 4-H market steer projects. They did a very good job feeding and working with their projects. They exhibited them in late August in the Ravalli County Fair in Hamilton, MT. Each of them stood as the top blue ribbon steer in their individual classes. Brooklyn's steer was a ¾ Salers steer and a maternal brother to Lot #3. Cole's steer was an Enhancer and a grandson of the dam of lot #8. We are excited to lend a hand to young people interested in livestock and the cattle industry!

- Genomic Enhanced EPDs
- This embryo brother is very clean in his design and long spined.
- We ran genomic evaluations on the embryo transplant bulls in order to provide more accurate EPDs since they don't have individual performance data included in their EPDs.
- See comments on lot #13 about his dam.

Return on Investment

We recognize that your purchase of breeding stock is a significant investment for your operation. We feel that Parke genetics offer you a great return on that investment and are confident that this year's offering will contribute to the future success of your program.

We understand that you don't always know exactly what your bull needs will be for next year at the time of our production sale. That being said, I have never heard someone say at turnout time that they have too many bulls. It is never a bad idea to have an extra bull around as I have found they are most often needed. Another benefit to the timing of our production sale is that over the past few years the bull sale averages have increased closer to breeding season. In addition to the savings there is no risk to you. We feed them free of charge and assume all responsibility for their health, soundness, and guarantee them to pass a semen test and meet your satisfaction at delivery in April.

It is well deserved but still very exciting to see the current market situation and most analysts are very optimistic about the coming years. We are excited to see many of our customers able to sell old bulls after several years of use for over \$4,000, sometimes more than they purchased them for. Big steer calves have been bringing more than \$2,500 a head throughout most of the summer and heifer calves are showing great strength recently as well. It is finally not only rewarding to be involved in beef production because of the work environment and associations but also financially!

One other aspect to keep in mind when evaluating your purchase is the increased return value. A simple calculation shows that a bull who sires calves weighing only 15 pounds more at weaning will conservatively produce an increased return of around \$3,200 over 3 years of use in current markets. This doesn't factor in the added value or multiplying affect if females are retained and incorporated into your breeding program. It is also important to recognize the significant value of longevity, not only your bull purchase but also the compounding effect of their offspring. Just something to keep in mind when evaluating your next herd sire purchase.

Quad Polled

- No Doubt, will leave just that, as the highest performing bull in the sale with an actual weaning weight of 986 lbs at a whopping 68% of his 3 year old dam's weight.
- He has an unmatched set of EPDs and performance numbers to go along with tremendous width, power, and volume.
- Dam is an extremely long sided, deep and balanced female who milks heavy and has a super personality.
- She is off to an amazing start and is a maternal sister to the lot #58 bull and grand daughter of lot #26's dam.

Breed Explanations

Optimizer - Term used by the Salers Association to refer to cattle that are crossbred between registered Salers and Angus or Red Angus cattle.

Enhancer - Name we have given to our 3-way cross cattle which consist of Salers, Simmental, and Angus or Red Angus genetics since 2018. We have been using 1/2 to 3/4 Salers X Angus or Red Angus females and breeding them to 1/2 to 3/4 Simmental X Angus sires. We are more concerned with the quality and type of cattle and their beneficial contributions to our program than any specific breed percentages.

We have been breeding Salers cattle for 30 years now and prior to that were using Simmental in our commercial herd. We decided to again incorporate some Simmental genetics into part of our Salers based cattle. We feel this can increase the level of hybrid vigor and genetic diversity available to our customers. Simmental genetics can contribute performance, depth, thickness, and rib eye area to their offspring. Salers cattle add calving ease, calf vigor, dressing percentage, fertility, hardiness and a clean and eye appealing phenotype. All three of these breeds are very strong in maternal traits and that continues to be a big focus of our breeding program! We plan to continue to breed Salers influenced cattle as well as Optimizers as we increase and develop our Enhancer program.

Quad Polled

- Newsmax will add power and pounds to his feeder offspring while also producing females that will make tremendous cows.
- This bull has a little more size and lots of rib depth and has 2 prior brothers that sold well.
- The Gina cow has achieved gold dam status with an average of 109 on her weaning indexes.
- We selected this Spartacus female to include in our embryo program this past Spring, with exciting success, because of her ideal phenotype and great production.
- Her first son sold to Dan Udem and has produced several offspring that have excelled in the show ring for his grandsons.

Maternal Brother to Lot #29

PRK Juneau 951J - Sept 2021

Dam & Lot #29

McCone County Fair again saw some top quality exhibits from Will and Charlie Hebel of Circle, MT. Will was awarded Reserve Champion Market Beef with his steer as well as being selected Grand Champion Overall Breeding Beef with his yearling bred heifer! His younger brother Charlie stood right behind him as 3rd overall in the market beef show with his red steer. Charlie also earned top honors as the Champion JR Beef Showman! Congratulations to the Hebel boys with their home raised Optimizer livestock. They were also able to participate in the Eastern Montana Champion of Champions Show in Miles City with their 2 steers. Both of these steers as well as the yearling heifer were sired by PRK Juneau 951J, a red Optimizer bull and maternal brother to lot #29. Juneau was purchased in our 2021 production sale by their grandparents, Dan and Dawn Udem. It is exciting to see Will and Charlie's enthusiasm for showing cattle and their involvement in the cattle industry – Keep up the great work!

Quad Polled

- A second generation Enhancer bull from our great Hickory cow family.
- If you, like us, believe in the importance of great cows then this bull has them stacked in his pedigree.
- He is a little bigger framed bull that is very long sided with as much performance data as any bull in the sale.
- His young dam is very thick made and ideal in her phenotype and her first calf is at the top of our bred heifers.

Quad Polled

- Another Jailbreak son with good performance and depth.
- This bull is very attractive, balanced, and clean made and one we noticed at a young age.
- Dam is a feminine fronted, attractive female with lots of volume and capacity.
- Her first daughter was sold in our 2023 sale to Lexi Nelson and went on to success in the show ring and now in the pasture.

Quad Polled

- Nevada is very balanced and thick made with a uniform design throughout.
- He carries a great weight per day of age and looks to be starting on feed very well.
- His mother is extremely deep ribbed and long bodied who milks well and has not missed no matter how we breed her.
- She has weaned all 4 of her calves at over 101 including 2 previous bulls and a very top end female in our bred heifer group.
- CCR Nationwide is a new sire in our Enhancer program selected for his strong maternal heritage and balanced numbers and look.

- A really nice patterned and attractive bull to end the bull sale with.
- He carries a lot of thickness in his quarter and down his top.
- Lots of generations of very good females stand behind him with his grand dam being a gold dam and his great grand dam raising the lot #8 bull and twice great grand dam raising the lot #70 bull.

Clay Nelson of Hall, Mt purchased a red Optimizer heifer calf from us last fall. He took her as his 4-H project. He exhibited her in the Tri-County Fair in Deer Lodge, Mt in the middle of August. She was shown in the market bred heifer show where she received a purple ribbon and was selected as the Champion. She was also awarded the top honors for the locally grown Market Bred Heifer. This project requires the exhibitor to complete an extensive record book as well as complete an interview with the judge. We congratulate Clay on a job well done and appreciate the hard work he puts into this project! His heifer, PRK Annie 479M, is a daughter of PRK Flint 198F as well as a descendant of the dam to lot #46 through her dam.

Pick of 2025 Heifer Calves

For the first time, we are offering a tremendous opportunity to select one heifer from our entire 2025 replacement pen. Choose from more than 170 of our best heifer calves with nothing held back. You may select any female—from our top embryo calves to our elite Salers, Optimizers, and Enhancer heifers, including many black and homozygous black options, along with a fantastic set of red females.

We are truly impressed with this group and believe it is the most uniform and powerful set we have ever assembled, top to bottom. We take great pride in our females and are confident they will excel in any environment—from the show ring to producing the next generation of seedstock.

Buyers will have full access to all available information and data to assist in making their selection. We ask that the selection be made prior to April 1, 2026. We will do our best to assist with delivery and accommodate buyers however possible.

PRK Wendy 4195M - September 2024

PRK Ribbon 375L - September 2023

Parke Ranch Bred Heifers

These bred heifers were born, developed, and bred here on Parke Ranch. They were weaned last Fall on September 26th and ran on meadow regrowth for 50 days. They were developed through the winter on long stem grass/alfalfa hay. They have not received any concentrates or supplements other than mineral. These heifers sell as commercial heifers even though many of them are registered females and siblings to bulls selling in this and past sales. You may purchase the registration papers on those registered for \$200 per head. They are bred to calving ease sires we use in our herd for both AI and clean-up bulls. You can find most of their service sires listed following the heifer lots or in the Reference Sire section before the bull lots. They were ultra-sounded for calving dates on August 5th. We have sorted the heifers into smaller groups by calving dates, breed, and phenotype. We would ask that you make arrangements to pick up your heifers by the end of the year. A video of the heifer lots will be available on our website and DVAuction, or you may come at any time to view the heifers.

Parke Ranch Bred Cows

This year we have decided to include some bred cows along with our bred heifers. These cows have been bred and raised on our ranch and a part of our cow herd. We are incorporating 100 bred heifers into production in our herd and need to make room for them on our current pasture situation. This requires us to remove 80 bred females each year. The bred cows we are including in the sale are the top end of these. Some are only being sold because they calve a little later in our 70-day breeding period. These are solid females who we feel will contribute to their new owners. They sell in smaller groups by age and calving dates. These cows sell as commercial females, even though many are registered females and again like the bred heifers if anyone is interested they may purchase the registration papers for \$200 per head. These cows are bred both AI and clean up to our herd sires and many have produced offspring in this and prior production sales.
