Parke Ranch

2026 Maternal Power Production Sale

11TH ANNUAL PRODUCTION SALE

Thursday, December 10th, 2026

1pm – At the Ranch – Drummond, Montana

Salers, Simmental, and Angus Genetics

165 Head Sell! - 85 Bulls - 50 Bred Heifers - 25 Bred Cows

Pick of 2026 Heifer Calves - 5 ASA Foundation Heifer Calves

ParkeRanch.com

Our family wants to extend an invitation to our 11th annual Maternal Power Production Sale to be held on December 10th, 2026 here at our ranch in Drummond, Montana. We are so appreciative of the past support of our program and all who helped make our first live auction sale last year a success! We thank you for taking time to look through and consider our sale offering and what it may offer to assist you in moving your program forward. It has been another exciting year to be involved in production agriculture as cow/calf producers with inventory numbers indicating it should continue.

This year's Maternal Power Production Sale will include over 85 bulls, 50+ bred heifers, 25 bred cows, and the opportunity to pick from our 2026 replacement heifer calves. This offering includes our largest and best group of high percentage Salers cattle and a larger number of red cattle than past years. We are really excited about the depth and quality of both the Optimizer (Salers x Angus) and Enhancer (SA x SM x AN) cattle offered and the benefits of heterosis which they can bring to your operations. Our focus is on breeding balanced cattle with great maternal characteristics and traits leading to fertility, longevity, and efficiency.

We are fortunate to be in a situation where our ranch is completely a family run operation. We get to work daily with multiple generations of our family, which is a huge blessing! We also feel this is a benefit to our customers because we are familiar with and know the cattle herd and those offered for sale in a detailed way. We do all of the breeding (other than embryo work), calving, cattle work, clipping, picturing, advertising & marketing, feeding, and delivery. If you have any questions, we will do our best to answer them completely and honestly.

Our family has been blessed again this year in many ways. The grand kids continue to grow and change so rapidly. In July our youngest, Scott, returned from his 2-year mission to the Kansas City, Missouri area! He had a great experience, and we were able to get quite a bit of work out of him in the 2 months before he left for his freshman year of college at BYU-I in Rexburg, Idaho. The other change is that in August Deana & Hesston moved back to the ranch. Hesston is working in construction management with a company in Missoula and Deana is helping around the ranch and coaching volleyball. It is great to have more family close!

We sure want to Thank You for taking time to look at our sale offering and for considering our program as a source of seedstock for your individual operations! Please join us on Dec. 10th for some good food, friendly socializing, and lots of quality cattle. Sale day is always pretty busy so don't hesitate to reach out at any time with any questions or for additional information on the sale offering. Videos of the sale cattle will be available by late November on DVAuction as well as sale day bidding for those unable to attend.

Thank you,
The Parke Family

Parke Ranch 11th Maternal Power Production Sale

December 10, 2026 Lunch 11:30 am – Sale 1:00 pm At the Ranch - Drummond, Montana

Eaf Parke - 406-240-4167 | Joseph Parke - 406-396-0369 | Spencer Parke - 406-498-6131
Home - 406-288-3573 | parkeranch@gmail.com

AUCTIONEER

Kyle Shobe	406-366-0472

SALE REPRESENTATIVES

Jeff Thomas, Prairie Star, Ag Weekly	406-581-8859
Matt Wznick, Western Ag Reporter	406-489-2414
Dean Pike, American Salers Association	303-810-7605

SALE TERMS AND DETAILS

- 1/2 of bull purchase price is due at sale time with the balance due at delivery unless other arrangements are made prior. If you desire you may pay full purchase price at sale time.
- Bred Females need to be picked up by December 31st.
- Bulls will be fed free of charge and at our risk until delivery, beginning around March 20th.
- We will notify you as soon as possible if any bulls are injured in our care or do not pass the semen test. You may select a replacement if one is available, credit, or receive a refund of your initial payment.
- Bulls will be delivered free of charge up to 500 miles with any additional mileage at cost.
- Parke Ranch is retaining 1/3 semen interest on all bulls and will collect semen before delivery, at our cost. You have full salvage value.
- A volume discount of 5% will be given on any purchase of 5 or more bulls.

CATTLE INSPECTION

- Cattle are available for inspection at the ranch at any time from now until sale day. Cattle will be penned at the ranch for viewing sale morning by 9:30 am.
- Lunch will be served sale day beginning at 11:30 am and there will be doughnuts, hot chocolate, coffee, and juice available that morning.
- Exit interstate 90 at Drummond and head south on Hwy #1 towards Philipsburg. After 2.6 miles turn east on Mullan Road and then travel 1.5 miles and our ranch is on the left.

FIRST SEASON BREEDING GUARANTEE

- All bulls are fully guaranteed for disposition, structural soundness, and fertility (semen quality & breeding ability)
- If a bull is deemed unusable due to any of the above reasons, please notify us before October 1, 2027 and prior to the bull being sold. You will be given an opportunity to pick a suitable replacement, if one is available, or given credit for a future purchase (purchase price less salvage value).
- We are not responsible for injury (footrot, broken penis, etc.), neglect, sickness or death that is outside of our control.
- Mortality Insurance will be available at the sale. Contact Jeff Thomas 406-581-8859.

BULL HISTORY & DEVELOPMENT

- Bulls had actual birthweights taken with a scale at birth.
- They have been raised without creep. Just milk and grass.
- Sale bulls are from the top 40% of our male calves. They were sorted many times based on dam quality, birthweight, disposition, confirmation, performance, and soundness.
- Bulls were weaned on October 1st and are being fed a mixed ration of alfalfa/grass hay, hay barley silage, and ground corn.
- They will be fed for a 2.8 lbs/day gain to grow them out sufficiently while ensuring their soundness and longevity. Customer reports have been very positive about the bulls condition and longevity.
- Bulls will be semen tested and vaccinated in March and be ready for turn out when delivered.
- Fall vaccinations included: Vision 8, Pyramid 5, Autogenous Type A, Autogenous Respiratory, Multi-Min, and Footrot. Spring vaccinations: Vision 8, Pyramid 5, Reprostar VL5 HB, & Footrot.

CATALOG DETAILS

- All double black bulls were DNA tested for coat color and those found to be homozygous black are designated as such in the catalog.
- Dams average on calves birthweights and weaning indexes are listed along with her udder score (the first digit represents her udder suspension, and the second digit is teat size, with 9 being the best and 1 the worst).
- The listed EPD's are from the American Salers Association.
- Potential Heifer bulls are ranked.(4* being the most reliable)

SALE ORDER

- Cattle will sell in catalog order with bulls first, followed by Pick of the 2026 heifer calves, then donation heifers, and lastly bred females.
- We may pull a few bulls forward to lead off the sale with and then resume catalog order following them.
- Our website the night before will have any order changes or outs.

ADDITIONAL INFORMATION

- A link to a video of the individual bulls and heifer groups will be on our website late Nov. Sale videos will also be posted on DVAuction.
- We will have updated current weights and scrotal measurements as well as disposition scores on all sale bulls prior to the sale. These will be available on our website or at the sale.

We Believe In . . . Will Represent Honestly . . . And Stand Behind Our Cattle!

HONORED GUEST
DAVE & JANET HAUPTMAN FAMILY

This year at our sale we want to recognize and give a big thank you to Dave & Janet Hauptman and their family. Our families have been connected and interacted for decades and through multiple generations. It is relationships like these which make living in rural communities among the greatest blessings in life!

My Father, Charlie, as a youth was in the 4-H club that was led by Lois Hauptman, who is Dave's mother. He also spent a short time working on the ranch owned by Stewart & Louis. During my early years our cattle and ranch were leased to the Hauptman family. My brother and I were able to spend many of our summers during grade school and our early high school years helping Dave & Janet with the cattle work, irrigation and haying. They had a lot of patience with a youngster learning to drive a reversed truck bunching small square bales as well as allowing me to go look through the cattle any time of the year. They were always great to lend a hand in helping with my 4-H cattle projects.

Dave's ancestors were among the first to settle in the Flint Creek valley and his family is among the most respected in our community. Dave has been the water commissioner on Flint Creek for many years, in addition to his ranching responsibilities. That he can do this and still be liked by everyone says all you need to know about his integrity and personality!

Janet grew up on her family's ranch south of Miles City. Teaching school brought Janet to the Drummond area where she met and married Dave. She spent 38 years as a top-notch teacher in the Drummond Elementary School where she taught and coached all 5 of our children. She has also been heavily involved in the 4-H program in the county and the fair for decades now.

Dave & Janet raised their 3 sons (Blake, Ben, and Ross) here in the Drummond community. Blake and Ross each worked for a summer on our ranch and Ben recently spent 10 years as our county extension agent working with our children through the 4-H program.

We also greatly appreciate their support for our seedstock business. Dave and Janet have been purchasing bulls from us most every year for the past 15+ years from our private treaty sales, Midland Bull Test, silent auctions and now our live auctions. They have also brought others along to look at our cattle and program.

The Hauptman family has played a big part in raising and being role models to myself as well as to our children! We greatly value and appreciate the years of help, support, and friendship from the Dave and Janet Hauptman Family! Truly one of the most meaningful things in the world are life-long friendships like the one we share with the Hauptman family!

BIDDING

If you are unable to join us at the sale we would encourage you to register several days in advance and you can bid live on DVAuction. We would be happy to discuss your needs and those lots that we feel would work for your operation if you would like. Please contact us several days in advance so that we have sufficient time to consider options that will work.

If you are unable to utilize DVAuction and would prefer to leave an order or bids please visit with us or any representatives in advance and be assured they will be handled with complete integrity and confidentially. There will be a limited number of phones available on sale day if you need to call in please let us know in advance and we will make accommodations.

EPD and Catalog Explanations

Below is a chart showing the Salers Breed EPD Averages for all 2023 born cattle.

EPDs	*CED*	*BW*	*WW*	*YW*	*MWW*	*Milk*	*Marb*	*REA*	*Doc*	*Stay*
Breed Av	**+13.5**	**-0.4**	**+61**	**+90**	**+49**	**+18**	**+0.1**	**+0.60**	**+11**	**+16**

The Salers and Simmental breed associations are both part of the new IGS multi-breed genetic evaluation. This means you can directly compare the Salers, Optimizer, and Enhancer EPDs.

All EPDs in the catalog were current as of Nov. 9th. These are now updated weekly so you may find the most current EPD for any animal by using the American Salers Association website and search with the animal's registration number.

CED (calving ease direct) - Expressed as a % of unassisted births. A bull with a +18.5 would be expected to produce 5% more unassisted births than the average Salers bull when bred to the same cows.

Doc (Docility) - Expressed as a percentage of an animals offspring that would be expected to have mild or restless disposition scores (1 or 2) rather than nervous, flighty, or aggressive scores (3, 4,or 5). A +21 means an animals offspring would be 10% more likely to have mild disposition scores than the breed average.

Stay (Stayability) - Expressed as a percentage of daughters who will remain in the herd until age 6. Cattle with a stayability of +21 would have 5% more daughters remain in the herd until at least age 6 than the average Salers.

Color - ***Hom. Black*** (Homozygous Black) bulls were DNA tested and will produce all black offspring when bred to red or black cows. ***Black*** - Black hided animal possessing one black and one red gene. When they are bred to black females also with a red gene they should produce 75% black offspring. When bred to red cows they can be expected to produce an average of 50% black calves.

Dam's Production - ***BW*** Number of calves born and their average actual birth weight in pounds. ***WW*** is the number of offspring weaned and their average weaning index. ***Udder*** is a two-digit score representing udder suspension and teat size with 9 being ideal. The first digit corresponds to udder suspension tightness and how level the udder floor and quarters are and the second digit represents the teat length, diameter, and shape.

Gold Dam - Used in the footnote comments. A designation from the Salers Association for those females who meet or exceed the following requirements: Calve by the age of 2.3 years, wean a minimum of 3 natural calves each born within a 395 day interval, and their calves must average at least a 105 weaning index. This designation represents the top 2% of registered females. Gold dams and sires are designated in pedigrees by an *.

- Bubba was our selection and top seller from the 2023 TB Salers Sale.
- A long sided, thick quartered, and big scrotal bull with a gentle disposition.
- Dam is a clean made, attractive female with a very good udder.
- This is his 3rd calf crop recognized for super length and great thickness.
- His first daughters have the look to make productive and long lived females in our program.

- We retained Mojo as a high % Salers bull to use in our own program on both heifers and cows.
- We really appreciate the muscle shape, depth of rib, and dimension of Mojo.
- His first calves are attractive patterned with good thickness in a moderate package.
- His dam and grand dam are both in our donor program because of their phenotype, productivity, consistency and quality of offspring.
- Mojo's maternal brother was a top seller in last years production sale and now walks the pastures at Silver Spur Salers.
- There are 5 embryo full brothers to Mojo in this years sale including some of the top end bulls.

- We purchased Mufasa out of the 2025 TB Salers Sale as our pick of their bulls.
- Mufasa is a balanced, long and cleanly designed 3/4 Salers bull whose first calf crop follow in his pattern.
- He possesses a very solid set of balanced EPDs to go along with his phenotype.
- His dam is a moderate female with gold dam status who consistently produces top end offspring in the TB herd.

- Lookout was a heifer bull we sold in our 2023 Production sale to Intermountain Bison.
- He is a moderate framed, thick bull with tremendous eye appeal and lots of calving ease.
- Lookout's dam weaned him at 76% of her body weight as a 2 year old and has continued that great efficiency with her next impressive calves.
- We haven't had a large number of Lookout calves but they average 79 lbs at birth with over a 100 weaning index.
- His calves are moderate in size but possess lots of thickness and style.

- This Enhancer bull was a top seller in our 2023 sale to Tracy Lake Land & Livestock and we are using him heavily in our AI program because of his phenotype and EPD combination.
- Lineup had as much width of top and thickness of quarter as a calf as anything we sold that year.
- His dam has as much volume, capacity, and thickness as any young female in our herd.
- The Lineup sired calves are likely the top sire group the past 2 years with moderate birthweights, top weaning performance, and very gentle dispositions.
- We also used a couple of top selling Lineup sons from our 2025 sale in our AI program this Spring.

- Jailbreak was used in our AI program to bring in some new genetics for our Enhancer program.
- He was selected for his balanced EPD profile, super phenotype, and knowledge that his dam had consistently raised top end bulls in the Gateway Program.
- His calves have tremendous rib and volume, along with wonderful dispositions and good length.
- His sons at our place perform very well on feed and have been some of the top yearling indexing bulls.
- His first daughters we calved in 2026 have good milk and very nice udder structure.

- We are using Magic in our Enhancer AI program for his balance and maternal contributions.
- He was a top selling bull in our 2024 sale to Steven Schwend.
- Magic is a Jailbreak son with added length of spine, extension and a clean design along with a red gene.
- His dam is a gold dam with lots of balance and eye appeal and a super udder structure and disposition.
- From his first calf crop we expect his offspring to not only have super maternal and dispositions but also above average performance and eye appeal.

- Monopoly was retained from our 2024 calf crop as a clean up sire in our Enhancer program.
- He offers tremendous depth of body, bold rib design, good thickness and an easy going personality along with top end performance.
- His dam is a higher performing female who has also achieved gold dam status.
- Monopoly's first calves are long and deep sided with a smooth phenotype and very good performance with an average weaning index of 106.

- This bull packs the performance into a very deep ribbed and long sided package.
- If looking for performance from a higher % Salers here is your bull with a 111 weaning index.
- He is the top weaning and WDA Salers bull in the sale and is easy going.
- Dam is a moderate sized female who is a gold dam with an average weaning index of 110 and yearling index of 108.
- All of her calves have been keepers with 3 top bulls including a Midland bull selling to Duane Rugg and a full brother last year to Dustin & Shannnon McCollum.
- She weaned this bull off at 66% of her body weight.

- A real herd sire prospect in this balanced, attractively designed, and thick made bull.
- We have admired this stud from birth and are not disappointed.
- He is very gentle with lots of depth into his flank and lower quarter.
- Possibly the best higher % Salers calving ease bull we have raised.
- His dam and grand dam are both part of our donor lineup.
- His full brother from 2024 is our herd sire PRK Mojo 024M, who sired several bulls in this years production sale.
- Full Brothers sell as lots 3, 4, 49 & 50.

- Definitely a herd sire prospect as Powder correctly describes this bull because of his explosive growth and muscle expression.
- He has been a standout all summer with a commanding presence in the pasture and is easy to work with.
- He has as much thickness of top and rear quarter definition as any bull in the sale and will sire an impressive set of high performing offspring.
- He combines all of this with a pedigree loaded with maternal and 4 Gold Dams.
- He weaned off of his 2 year old dam at 878 pounds at 70% of her weight.
- She is a good milking young female who has a bright future and her maternal brother sells as lot #65.

★ **Potential Heifer Bull • Quad Polled**

- Another potential herd sire as this bull has the look and eye appeal that will catch your attention on sale day.
- He is extremely balanced and smooth in his design coupled with a powerful hip and quarter.
- A moderate birthweight in conjunction with good performance makes him very versatile.
- His 2 year old dam is a nicely designed female with good milk and udder who weaned him at 64% of her weight.

Return on Investment

We recognize that your purchase of breeding stock is a significant investment for your operation. We feel that Parke genetics offer you a great return on that investment and are confident that this year's offering will contribute to the future success of your program.

We understand that you don't always know exactly what your bull needs will be for next year at the time of our production sale. That being said, I have never heard someone say at turnout time that they have too many bulls. It is never a bad idea to have an extra bull around as I have found they are most often needed. Another benefit to the timing of our production sale is that over the past few years the bull sale averages have increased closer to breeding season. In addition to the savings there is no risk to you. We feed them free of charge and assume all responsibility for their health, soundness, and guarantee them to pass a semen test and meet your satisfaction at delivery in April.

It is well deserved but still very exciting to see the current market situation and most analysts are very optimistic about the coming years. We are excited to see many of our customers able to sell old bulls after several years of use for over $3,800, sometimes more than they purchased them for. Big steer calves have been bringing more than $2,800 a head throughout most of the summer and heifer calves are showing great strength recently as well. It is finally not only rewarding to be involved in beef production because of the work environment and associations but also some financial rewards for our hard work!

One other aspect to keep in mind when evaluating your purchase is the increased return value. A simple calculation shows that a bull who sires calves weighing only 15 pounds more at weaning will conservatively produce an increased return of around $3,200 over 3 years of use in current markets. This doesn't factor in the added value or multiplying affect if females are retained and incorporated into your breeding program. It is also important to recognize the significant value of longevity, not only your bull purchase but also the compounding effect of their offspring. Just something to keep in mind when evaluating your next herd sire purchase.

★★ **Potential Heifer Bull • Quad Polled**

- A longer bodied moderate birthweight bull that is very clean and attractive in his design.
- Like the typical PRK Lineup sons he also has lots of thickness and a powerful hip.
- Lineup's calves have been among our favorites the last 2 years and we continue to use him as well as 2 of his sons heavily in our AI program.
- Payday's young dam is a moderate sized female with lots of length.
- She milks really well and weaned this calf off at 62% of her body weight.

★★ Potential Heifer Bull • Quad Polled

- This red Lineup son comes with a unique combination of calving ease and performance due to his great length.
- Prime has lots of shape and balance to his phenotype.
- He had a full brother, PRK Novel 999N, who was a very top end bull in last year's sale going to Paul & Laura Foster.
- We collected and used Novel very heavily in our AI'ing this past Spring for his balanced phenotype & EPD profile along with great performance at weaning and on feed.

Clay Nelson purchased Mesa from us as a heifer calf. Mesa is a daughter of our herd sire PRK Lineup 2188 L. He exhibited her at the 2026 Tri-County Fair in Deer Lodge, Montana as a replacement heifer project. He received a purple ribbon in his class. He then sold her in the market sale, and we ended up purchasing her to add back into our herd. He also exhibited the Reserve Champion Replacement Heifer. Clay also received a purple with his breeding heifer. This was Clay's 10th and final year in 4-H, and he once again had a very successful fair. Congratulations on a great final year and good luck in your future endeavors!

★ **Potential Heifer Bull • Quad Polled**

- Piston is at the top end of our red bulls for weaning and current WDA due to lots of rib dimension and length.
- He is the 3rd full brother from this successful mating that has worked well and produced consistent top tier red bulls.
- The dam is from the same Kit cow family as lot #14's dam.
- She has as much volume and thickness as any female in the herd while still putting it together in a balanced and attractive package.

★ **Potential Heifer Bull • Quad Polled**

- Here is a big stout, powerful Jailbreak son who has good depth and an eye catching phenotype.
- His mother is a moderate sized female with very good thickness and milk who is easy going and nice to look at.

Breed Explanations

Optimizer - Term used by the Salers Association to refer to cattle that are crossbred between registered Salers and other registered breeds (generally Angus or Red Angus).

Enhancer - Name we have given to our 3-way cross cattle which consist of Salers, Simmental, and Angus or Red Angus genetics since 2018. We have been using 1/2 to 3/4 Salers X Angus or Red Angus females and breeding them to 1/2 to 3/4 Simmental X Angus sires. We are more concerned with the quality and type of cattle and their beneficial contributions to our program than any specific breed percentages.

We have been breeding Salers cattle for 30 years now and prior to that were using Simmental in our commercial herd. We decided to again incorporate some Simmental genetics into part of our Salers based cattle. We feel this can increase the level of hybrid vigor and genetic diversity available to our customers. Simmental genetics can contribute performance, depth, thickness, and rib eye area to their offspring. Salers cattle add calving ease, calf vigor, dressing percentage, fertility, hardiness and a clean and eye appealing phenotype. All three of these breeds are very strong in maternal traits and that continues to be a big focus of our breeding program! We plan to continue to breed Salers influenced cattle as well as Optimizers as we increase and develop our Enhancer program.

Quad Polled

- Powerball is a flat out massive bull with width and muscle from every direction and angle.
- If interested in increasing your payweight on your calf crop evaluate his performance, EPD numbers and 2nd highest WDA.
- His young dam is another great female from her looks to her performance.
- She also will become a Gold Dam as her 3 calves average weaning index is 111 and all 3 are very good with her bull selling to Dingwall Ranch last year.
- Her mother is our great Hickory donor cow that has produced 15 offspring with all being keepers.

Quad Polled

- A bull that has an impressive set of balanced numbers that won't disappoint when you find him sale day.
- He is extremely long sided, with good depth, and correct in his lines.
- A thick made young cow that milks very heavy, weaning this bull at 63% and now has 2 good bulls at a 112 weaning average.
- This female is a maternal sister to the dam of lot #9 and the lot #65 bull so a very consistent cow family for quality.

ET Bull - Genomic Enhanced EPD • Small Scurs Removed

- Payout is an embryo transplant bull with a very attractive profile who has good depth and should produce some terrific females.
- He had a full brother last year selling to Clint Peters and there are 2 more bothers selling as Lots #73 & #76.
- Donor dam PRK Gina is a gold dam that is very clean, correct and feminine with tremendous milk and udder structure.
- She has produced 4 previous bulls, including one to Rock Creek Cattle and PRK Juneau 951J to Dan Undem.

Dam to Lot#37

PRK Gina 951G

Will and Charlie Hebel of Circle Montana once again had some of the top exhibits at the McCone County Fair. Will was Reserve Champion overall Breeding Project with his cow Maggie out of PRK Juneau with heifer calf Paige out of PRK Lima. He also exhibited a yearling heifer Naomi out of PRK Juneau. Will was just picked to be awarded the 2027 Nile Merit Heifer to add to his herd. Charlie Exhibited the Reserve Champion Market Beef with his Red Angus sired steer. He was also the Junior Round Robin Showmanship Champion.

PRK Juneau was purchased in our 2021 production sale by their grandparents, Dan and Dawn Undem. Juneau 951J was the first calf of one of our donor cows, PRK Gina 951G. 3 maternal brothers sell in this year's sale as lots 37, 73, and 76. PRK Lima was purchased in our 2023 production sale by their parents, Lee and Katie Hebel. PRK Lima 177L is a son of our herd bull MAC Judson. Congratulations on a great fair season! Keep up the good work and continue growing your herd!

Quad Polled/scabs

- Another moderate framed Mojo son who follows his typical pattern for thick ended and wide topped bulls.
- He is a moderate birth weight bull with above average growth numbers and disposition.
- Dam is an easy fleshing, deep ribbed good 2 year old female.

★★★★ Potential Heifer Bull • Scurs Removed

- Here is a bull that should make a no worries bull for heifers with his actual birthweight and calving ease EPD profile.
- He still demonstrates a great deal of length and good thickness.
- This female was another purchase from TB Salers as a yearling heifer.
- She is a good producing attractive cow that milks very heavily but could have a better udder.

Quad Polled

- Here is the youngest calf in the sale offering but near the top for WDA and weaning index thus the reason he was kept a bull.
- A heavy milking and long bodied female.
- Laser is a calving ease sire who has a pedigree stacked with gold dams who has sired some top end bulls the last couple of years.

The Tuckett's, Cole and Brooklyn, of Stevensville, Montana again came to our ranch and selected a couple of steers for their 4-H market beef projects. They both picked Enhancer steers that were sired by PRK Hercules 615H out of young Optimizer females.

Cole & Brooklyn did a great job with their steers again this year and were able to exhibit them in the Ravalli County Fair in Hamilton, MT in early September. Cole received a purple ribbon and stood second in his class with his 1506-pound steer. Brooklyn's steer weighed 1486 pounds and received a blue ribbon in her class. Congratulations to both Brooklyn and Cole on a job well done!

- Looks to be lots of fertility here as she had twins as a 2 year old and then bred back early AI.

PICK OF 2026 HEIFER CALVES

We are going to offer the great opportunity to pick a heifer calf from our entire 2026 replacement group of heifer calves. The winning bidder will be able to choose a heifer from our 180 head of replacements retained this year. You may select any female – from our high percentage Salers as well as our Optimizer & Enhancer heifers. These include several embryo transplant daughters as well as a quality group of reds and a large offering of blacks.

Our program has been focused on breeding balanced, fertile, efficient, and problem free cattle with an emphasis on maternal and convenience traits. We are very excited about this group of replacements and are confident the buyer will find several options that would make great donors, front pasture females, or show ring winners to move their program forward.

Salers Association Donation Heifer:
PRK Heavenly 617P

The Buyer will have full access to all available records and data and any information we have to assist in making their decision. We ask that the selection be made prior to April 1st of 2027 before we begin breeding preparations. We will do our best to accommodate in any way we can and if possible assist with delivery.

HEIFER CALVES

Level Above the Clouds XV
Foundation Female Sale
Selling 5 2026 Born Heifer Calves
from these outstanding Salers operations

The Foundation is a very important part of the Salers Association. All dollars are utilized to participate in research for Salers cattle including the weekly genetic and genomic EPD evaluations through International Genetic Solutions. The Foundation also helps support our youth through several collegiate scholarships.

PARKE RANCH BRED HEIFERS

These bred heifers were born, developed, and bred here on Parke Ranch. They were weaned last Fall on September 29th and ran on meadow regrowth for 45 days. They were developed through the winter on long stem grass/alfalfa hay and hay barley. They have not received any concentrates or supplements other than mineral. These heifers sell as commercial heifers even though most of them are registered females and siblings to bulls selling in this and past sales. You may purchase the registration papers on those registered for $250 per head. They are bred to calving ease sires we use in our herd for both AI and clean-up bulls. You can find most of their service sires listed following the heifer lots or in the Reference Sire section before the bull lots. They were ultra-sounded for calving dates on August 21st. We have sorted the heifers into smaller groups by calving dates, breed, and phenotype. They will sell following the bulls. We would ask that you make arrangements to pick up your heifers by the end of the year. A video of the heifer lots will be available on our website and DVAuction, or you may come at any time to view the heifers.

PARKE RANCH BRED COWS

This year we are again including some bred cows along with our bred heifers in the sale. These cows have been raised on our ranch and a part of our cow herd. We are incorporating 100 bred heifers into production in our herd and need to make room for them on our current pasture situation. This requires us to remove roughly 80 bred females each year. The bred cows we are including in the sale are the top end of these. Some are only being sold because they calve a little later in our calving window. These are solid females who we feel will contribute to their new owners. They sell in smaller groups by age and calving dates. These cows sell as commercial females, even though many are registered females and again like the bred heifers if anyone is interested they may purchase the registration papers for $250 per head. These cows are bred both AI and clean up to our herd sires and many have produced offspring in this and prior production sales.

CROSSBREEDING PAYS

- Add the Salers Influence to Your Cow Herd

Now is the time to add the inputs to position your cow herd for the future. As the nation's cow herd prepares to be rebuilt, you can add those genetic inputs to insure you are well positioned for Profit for today and in the future. Why not add those inputs that would insure things such as calf vigor and calf survivability, fertility, maternal excellence and unmatched cow longevity?

The advantage of crossbreeding comes in the form of heterosis or hybrid vigor. We have known for decades that the biggest advantages come to those traits that are lowly heritable. Traits like reproduction and fertility. You can spend a lifetime working to improve these traits, or you can add crossbreeding to your cow herd and see improvement very quickly. The advantages of Maternal heterosis are significant. The effects are multiple and cumulative. You will see them add up to be drastically significant over time. If you've got fertility in the 70% to 85% range for breed up come pregnancy check time, it's time to re-evaluate what is going on. It's time to consider crossbreeding and adding the Salers-influence cow to your cow herd.

Increase in Maternal Heterosis

Trait	% Advantage
Calving Rate	+3.7% Increase
Individual Weaning Weight	+3.8% Increase
# of Calves in Lifetime	+17% Increase
Longevity	+38% Increase
Pounds of Calf Weaning Weight for the Lifetime of the Cow	+25.3% Increase

Parke Ranch Philosophies

We are huge believers in the benefits that are available through crossbreeding and the resulting heterosis. We have seen these for decades in our commercial cattle and now in our registered program. One of the important reasons we have incorporated some Simmental genetics into our Optimizer cattle is the increased benefits of hybrid vigor and additional genetic diversity we can offer our customers.

Among the traits that are most important in our program are those of fertility and longevity. We put a lot of focus on the Stayability EPD. We are very critical of the need for every female to have a calf each year and early in the calving window. We do not keep any bulls to market that weren't born in the first 45 days of the calving season for their dam's age group. We also don't retain any females in our herd that are not bred up in a 60-day window. We feel that by emphasizing these criteria in our program it will assist in creating profit for our customers.
